

Tow bar wiring kit with electronic module

Application:

- cargo trailers;
- to 7-pin trailer wiring systems.

Short description:

The module does not overload the lamps driving system of the car as the current consumption from signal inputs is approximately 2 mA, which excludes the malfunction of the car electronics system.

Module can be connected to lamps both with LED diodes and light bulbs.

The module is economic solution for 7-pin trailer wiring systems.

Assembly kit content:

1. Electronic module;
2. Main harness;
3. Trailer 7-pin socket with seal and screws;
4. Montage kit.

Main features:

-  dedicated to 7PIN socket
-  compatible with vehicle lamps which have LED diodes or bulbs
-  vehicle fog light is not turned off

Trailer tester available in company's offer gives possibility to simulate trailer wiring system and verify kit installation.
